

# POCKET GEMS Manual Testing

## Client Success Story

### Summary

Pocket Gems is a game developer/publisher of video games. Pocket Gems was formed in 2009 and have pioneered free to play mobile games. They have worked to provide fun games and have delighted and entertained millions of players.

**Team Size: 3 Lead + 25 Resources**

### Challenge

Pocket Gems required comprehensive testing coverage for various iOS and Android devices. Furthermore, adhering to strict release schedules made it difficult to complete all quality assurance tasks efficiently.

### Solution

A cross section of Android and iOS mobile devices was maintained to provide coverage on various configurations of mobiles. Expleo suggested and procured additional devices as required to expand the device portfolio and provide coverage. The team provided extended and weekend support as required to achieve the release schedule. Communication protocol was defined in advance and adhered to stringently. The team also utilized their domain and technical knowledge to unblock testing using debug tools and suggested changes. The long-term engagement and experienced resources engaged helped rise in productivity.

### Outcome

The primary objective of the functional testing was to verify all functionalities on all mobile devices were met. The target was to achieve the release target date and provide coverage across devices.

With addition of required and suggested devices, Trissential/Expleo increased the coverage by 22% on iOS and 42% on Android.

We tracked a **40% rise in productivity** due to long term engagement and experienced team members which reduced the time and also ensured coverage on the required devices.
