

BUILT TO SCALE

FIVE WEEKS TO MODERN ENGINEERING READINESS

THE CLIENT

Leading manufacturer of high-quality, whole food-based nutritional supplements, serving healthcare professionals and customers through a growing digital commerce presence.

THE SOLUTION

Trissential partnered with the client using our proven “Do-Manage-Mentor” model to quickly assess gaps and strengthen engineering operations. We optimized workflows, enhanced QA automation, modernized CI/CD pipelines, improved data integration, and introduced better code management practices. All efforts were aligned to a strategic roadmap that addressed immediate priorities while supporting long-term digital transformation goals.

NEXT STEPS

Don't guess - assess. Our Digital Engineering Healthcheck reveals where to focus now to deliver faster, smarter, and with less risk.

THE CHALLENGE

Client was limited by a costly, outdated e-commerce platform with reliability and quality issues that slowed growth and efficiency. As they prepared to transition to a modern platform and integration solution, urgent gaps in software engineering, QA automation, DevSecOps, and deployment practices had to be addressed to ensure a successful digital transformation.

THE OUTCOME

In just five weeks, the client strengthened internal engineering capabilities, modernized QA and deployment practices, and gained a clear roadmap to guide near-term investments. With Trissential's support, they reduced operational risk, improved reliability, and accelerated their broader digital transformation, laying the foundation for a successful transition to their future e-commerce platform.
